Introduction

The **6000 Sq. Ft. Farmland Investment Model** is designed to provide investors with an opportunity to own agricultural land that combines **long-term land appreciation, tax-free agricultural income, and sustainable plantation-based revenue**.

Located within the **227-acre Eshwari Siddha Peeta development**, these farmland plots are part of a larger vision that integrates **spiritual ecology, sustainable agriculture, and conscious land ownership**.

The investment model focuses on cultivating **fruit-bearing trees and sandalwood plantations**, which generate long-term value through both agricultural production and land appreciation.

This model is ideal for individuals seeking:

- Long-term wealth creation
- Sustainable agricultural income
- Land ownership in a growing spiritual ecosystem
- Environmentally responsible investments

Plot Size and Structure

Each farmland unit in the project is **6000 square feet** in size.

Key Details

Plot Size: **6000 Sq. Ft.**

Equivalent in Acres: **0.1377 Acres**

Land Type: **Agricultural Land**

Ownership Type: **Individual Registered Title**

Usage: **Tree Plantation and Sustainable Farming**

Each plot is designed to support **perennial tree plantations**, which require minimal maintenance while producing long-term economic value.

Plantation Model

The agricultural model focuses on planting a combination of **sandalwood trees and fruit-bearing trees**.

Sandalwood Trees

Sandalwood is one of the **most valuable trees in the world** due to its use in:

- Perfume industries
- Ayurvedic medicine
- Religious rituals
- Luxury wood products

Sandalwood trees typically mature in **12–15 years**, at which point they can generate significant economic returns.

Fruit-Bearing Trees

Fruit trees provide **regular annual yield** and may include varieties such as:

• Mango
• Guava
• Sapota
• Coconut
• Lemon

These trees contribute to:

• Annual agricultural income
• Soil health improvement
• Long-term sustainability

Estimated Tree Plantation Capacity

A **6000 Sq. Ft. plot** can comfortably support the plantation of approximately:

• **20 to 25 sandalwood trees**

or

• **Mixed plantation of 10–15 sandalwood trees and 20–25 fruit trees**

Spacing requirements ensure optimal growth and long-term productivity.

Typical spacing for sandalwood trees ranges between **12 to 15 feet**, allowing proper root development and sunlight exposure.

Long-Term Return Potential

The investment model is designed around **two primary return streams**:

1. Agricultural Income

Fruit trees can begin producing yield within **3 to 5 years**, generating periodic income from fruit harvests.

This provides investors with **ongoing agricultural revenue** during the early years of the plantation.

---

2. Sandalwood Tree Value

Sandalwood trees increase significantly in value as they mature.

Estimated maturity period: **12 to 15 years**

At maturity, each sandalwood tree may produce valuable **heartwood**, which is the most economically valuable part of the tree.

Sandalwood heartwood is highly sought after globally for:

• Essential oils
• Luxury carvings
• Religious uses
• High-end fragrance manufacturing

Because of this demand, sandalwood plantations are often considered **long-term premium agricultural investments**.

Land Appreciation Potential

In addition to plantation income, farmland investments benefit from **land value appreciation**.

Factors contributing to appreciation include:

• Increasing demand for agricultural land
• Limited availability of fertile farmland
• Growth of spiritual tourism around Eshwari Siddha Peeta
• Infrastructure development in surrounding areas
• Long-term ecological development within the 227-acre project

Historically, agricultural land near spiritual or tourism destinations tends to experience **steady appreciation over time**.

Tax Benefits

Agricultural income in India typically qualifies for **tax exemptions under agricultural income rules**.

This means that income generated through:

• Fruit production
• Plantation harvesting
• Agricultural activities

may be treated as **tax-free income**, depending on prevailing regulations.

This tax advantage makes agricultural land investment particularly attractive compared to many other investment classes.

Low Maintenance Investment

Tree-based agriculture requires **relatively low maintenance compared to active farming operations**.

After initial plantation and early growth stages, trees require minimal intervention.

Benefits include:

• Lower operational effort
• Sustainable long-term production
• Reduced dependency on seasonal crops
• Long-term natural asset growth

This makes farmland investment suitable for **passive investors and long-term asset holders**.

Integration With Spiritual Ecosystem

The farmland plots are located within the **Eshwari Siddha Peeta spiritual ecosystem**, which includes:

• Sri Chakra Temple dedicated to Goddess Tripura Sundarī
• Sacred meditation and healing spaces
• Organic food cultivation
• Cow sanctuary (Goshala)
• Spiritual education centers

This unique environment combines **agriculture, spirituality, and ecological harmony**, creating a rare land ownership opportunity.

Investors become part of a **larger spiritual and environmental initiative** that promotes conscious living and sustainable land use.

Security and Legal Assurance

Each farmland plot includes:

• Clear legal documentation
• Verified land titles
• Agricultural zoning compliance
• Immediate registration eligibility

This ensures transparency and confidence for landowners.

Proper documentation guarantees **secure ownership and legal protection** for investors.

Ideal Investor Profile

The 6000 Sq. Ft. farmland investment model is ideal for individuals who:

• Want to diversify into land assets
• Prefer long-term natural investments
• Believe in sustainable agriculture
• Seek passive agricultural income
• Wish to be associated with spiritual ecological projects

This model appeals to both **financial investors and spiritually conscious landowners**.

Long-Term Vision

The Eshwari Siddha Peeta farmland ecosystem aims to create a **sustainable agricultural and spiritual environment** where land ownership contributes to:

- Ecological balance
- Sacred land preservation
- Conscious agricultural practices
- Long-term natural wealth creation

The vision is to build a community where **nature, spirituality, and sustainable investment coexist harmoniously**.

Conclusion

The **6000 Sq. Ft. Farmland Investment Model** represents a unique opportunity to combine **land ownership, agricultural income, and long-term asset appreciation**.

Through the cultivation of **sandalwood and fruit trees**, investors participate in a sustainable agricultural system while benefiting from the growth potential of land within a spiritually significant ecosystem.

This investment model offers not just financial potential but also a meaningful connection to **nature, sustainability, and sacred land stewardship**.
