Farmland Annual Income Calculation

6000 Sq. Ft Agricultural Plot – Estimated Yield and Revenue Model

---

Introduction

This document presents the **estimated annual agricultural income potential** from a **6000 square foot farmland plot** under the Eshwari Siddha Peeta agricultural development.

The farmland model is designed around **mixed perennial plantation**, combining fruit trees and high-value crops. The goal is to create a **sustainable agricultural ecosystem that generates recurring income while allowing land value to appreciate over time**.

All calculations in this document are **approximate estimates based on typical crop yields and average market prices in the Chikkaballapura region of Karnataka, India**.

Actual yields and income may vary depending on factors such as climate conditions, tree maturity, agricultural practices, and market demand.

Location Market Context

The farmland is located near **Chikkaballapura, Karnataka**, an agricultural region known for fruit cultivation and plantation crops.

Average wholesale agricultural market prices in this region include:

Banana: ₹25 – ₹50 per kilogram
Mango: ₹40 – ₹48 per kilogram (mandi average)
Jackfruit: approximately ₹80 per kilogram
Amla (Indian gooseberry): approximately ₹80 per kilogram
Coconut: approximately ₹32 – ₹50 per kilogram depending on season
Areca nut: approximately ₹400 – ₹800 per kilogram depending on quality

These values are used as **reference prices for estimating agricultural income potential**.

Plantation Composition per 6000 Sq Ft Plot

A typical 6000 sq ft plantation plot may include a mix of the following trees:

Coconut Trees: 2
Areca Nut Trees: 8
Mango Trees: 6
Moringa Trees: 12
Cashew Trees: 6
Jackfruit Trees: 2
Jamun Trees: 6
Amla Trees: 6
Nutmeg Trees: 6
Banana Plants: 10

This diversified plantation structure spreads agricultural risk and ensures **multiple harvest cycles throughout the year**.

Coconut Income Estimate

Number of trees: 2

Average annual yield per tree:
80 to 90 coconuts

Total annual production:
160 to 180 coconuts

Average farm-level price:
₹25 to ₹30 per coconut

Estimated annual income:

160 × ₹30 = ₹4,800
180 × ₹30 = ₹5,400

Estimated coconut income per year:
₹4,800 – ₹5,400

Areca Nut Income Estimate

Number of trees: 8

Average yield per tree:
2 kilograms of dried nut

Total annual production:
16 kilograms

Average market price:
₹400 – ₹800 per kilogram

Estimated annual income:

16 × ₹400 = ₹6,400
16 × ₹800 = ₹12,800

Estimated areca nut income per year:
₹6,400 – ₹12,800

Mango Income Estimate

Number of trees: 6

Average yield per tree:
200 fruits

Total fruits produced:
1,200 mangoes

Average fruit weight:
200 grams

Total production weight:
240 kilograms

Average mandi price:
₹40 – ₹48 per kilogram

Estimated annual income:

240 × ₹40 = ₹9,600
240 × ₹48 = ₹11,520

Estimated mango income per year:
₹9,600 – ₹11,520

Moringa Income Estimate

Number of trees: 12

Average yield per tree:
250 pods

Total pods produced:
3,000 pods

Conversion estimate:
40 pods ≈ 1 kilogram

Total weight:
Approximately 120 kilograms

Average market price:
₹25 – ₹40 per kilogram

Estimated annual income:

120 × ₹25 = ₹3,000
120 × ₹40 = ₹4,800

Estimated moringa income per year:
₹3,000 – ₹4,800

Cashew Income Estimate

Number of trees: 6

Average yield per tree:
8 – 10 kilograms

Total production:
48 – 60 kilograms

Average farm price:
₹150 – ₹200 per kilogram

Estimated annual income:

48 × ₹150 = ₹7,200
60 × ₹200 = ₹12,000

Estimated cashew income per year:
₹7,200 – ₹12,000

Jackfruit Income Estimate

Number of trees: 2

Average fruits per tree:
40 fruits

Total fruits produced:
80 fruits

Average fruit weight:
5 – 10 kilograms

Total production weight:
400 – 800 kilograms

Average market price:
₹80 per kilogram

Estimated annual income:

400 × ₹80 = ₹32,000
800 × ₹80 = ₹64,000

Estimated jackfruit income per year:
₹32,000 – ₹64,000

Jamun Income Estimate

Number of trees: 6

Average yield per tree:
40 – 60 kilograms

Total production:
240 – 360 kilograms

Average market price:
₹80 – ₹120 per kilogram

Estimated annual income:

240 × ₹80 = ₹19,200
360 × ₹120 = ₹43,200

Estimated jamun income per year:
₹19,200 – ₹43,200

Amla Income Estimate

Number of trees: 6

Average yield per tree:
30 – 40 kilograms

Total production:
180 – 240 kilograms

Average market price:
₹80 per kilogram

Estimated annual income:

180 × ₹80 = ₹14,400
240 × ₹80 = ₹19,200

Estimated amla income per year:
₹14,400 – ₹19,200

Nutmeg Income Estimate

Number of trees: 6

Average nuts per tree:
1,200 – 1,500

Total nuts produced:
7,200 – 9,000 nuts

Estimated farm price:
₹3 – ₹5 per nut

Estimated annual income:

7,200 × ₹3 = ₹21,600
9,000 × ₹5 = ₹45,000

Estimated nutmeg income per year:
₹21,600 – ₹45,000

Banana Income Estimate

Number of plants: 10

Average yield per plant:
20 – 25 kilograms

Total production:
200 – 250 kilograms

Average price:
₹25 – ₹50 per kilogram

Estimated annual income:

200 × ₹25 = ₹5,000
250 × ₹50 = ₹12,500

Estimated banana income per year:
₹5,000 – ₹12,500

Total Estimated Annual Agricultural Income

Crop	Income Range (₹)
Coconut	4,800 – 5,400
Areca Nut	6,400 – 12,800
Mango	9,600 – 11,520
Moringa	3,000 – 4,800
Cashew	7,200 – 12,000
Jackfruit	32,000 – 64,000
Jamun	19,200 – 43,200
Amla	14,400 – 19,200
Nutmeg	21,600 – 45,000
Banana	5,000 – 12,500

Final Estimated Income

Minimum Estimated Annual Income:

₹1,24,300

Maximum Estimated Annual Income:

₹2,29,920

Average Estimated Annual Income:

₹1,77,110

Important Notes

Agricultural income depends on several factors including:

• Tree maturity
• Climate conditions
• Soil quality
• Agricultural management practices
• Market price fluctuations

The values presented in this document are **illustrative estimates based on current regional market data and average yield expectations**.

Conclusion

The diversified plantation model of the 6000 sq. ft. farmland plot creates a **balanced agricultural income structure** with multiple crops producing across different seasons.

This approach reduces agricultural risk while providing a combination of:

• seasonal fruit harvests
• plantation crop revenue
• long-term tree asset growth

When combined with land value appreciation, the farmland model offers **both income potential and long-term agricultural investment value**.
